A	ppendix A Local Service Centre Analysis	13

### **Objective**

To review the data and criteria used to identify Breckland local service centre parishes in the 2017 Topic paper and consider whether the categorisation of those parishes still applied.

#### 1 Introduction

- 1.1.1 Following the consultation in January and February, further updated information on the service provision of villages was provided, including updated bus service provision. Consequently, some village settlements have changed definitions e.g. Rocklands is now considered a Local Service Centre and Beeston remains as a village with a boundary due to loss of community shop and loss of bus service provision.
- 1.2 The sustainability of rural services needs to be supported by appropriately located well-designed development, whilst protecting the environment and wider rural area. Issues around rural isolation, inaccessibility to services and reliance on the private car also need to be considered in any development strategy for a rural area such as Breckland.
- 1.3 In July 2017, Breckland Council prepared a topic paper to identify Local Service Centres within the District, that had appropriate provision of services which could support further development and in turn that development could support those existing services.
- 1.4 A local service centre was defined as a parish which met all 5 of the following service provision criteria, a primary school, a village shop, public transport, a community facility and employment.
- 1.5 The 2017 topic paper identified the following parishes as Local Service Centres:

Ashill, Banham, Bawdeswell, Garboldisham, Great Ellingham, Harling Hockering Kenninghall, Litcham, Mattishall, Narborough, Necton, North Elmham, Old Buckenham, Shipdham, Sporle, Swanton Morley and Weeting. These parishes were identified in the Local Plan under HOU2 and were planned for 10% increase in growth.

- 1.6 It is important that the Local Plan: Full Update is based on up to date evidence. It is likely that for some parishes there may have been some significant changes in the provision of key services and facilities since 2017; as well as need to consider whether the criteria used remains valid.
- 1.7 This paper reviews the findings of the 2017 topic paper and re-examines the parameters of service provision criteria and updates the data against these criteria, as well as revisiting the analysis and the recommendations for the categorisation of those Local Service Centres and considers whether their designation still applies.

#### 2 National Policy Context for Local Service Centres

- 2.1 In a predominantly rural District like Breckland it is important to address issues such as access to services and significant local housing need that would promote sustainable development in rural areas. Such proposals can enhance and maintain the vitality of rural communities, which genuinely function as immediate service centres for the surrounding rural areas.
- 2.2 The National Planning Policy Framework (NPPF) highlights the need to support economic growth in rural areas by taking a positive approach to sustainable new development through promoting the retention and development of local services and community facilities in villages. It also reinforces the need for promoting housing in locations where it would enhance or maintain the vitality of rural communities.

# 3 Local Policy Context and Methodology of Identifying Local Service Centres in Adopted Local Plan

3.1 As part of the current Local Plan evidence base; the Preferred Site Options and Settlement Boundaries Consultation (September 2016) set out that parishes

should be allocated as Local Service Centres where they meet all 5 qualifying criteria:

**School -** A primary school is the key criteria, as this is considered the most important focal point for residents in villages.

**Public Transport** - An assessment of the level of public transport access within the parish by focussing on the frequency of services during peak hours to larger settlements.

**Community Facility** - This can include a number of different facilities such as a village hall, public house, restaurant or café.

**Employment** - The level of employment available within the parish. In order to meet the criteria a parish must have approx. 20 businesses within the village and at least two of these businesses employing 10 or more people

**Shop/Post Office** – Whether there is a local shop or convenience provision within the village e.g., included within a pub.

- 3.2 In the 2017 topic paper, the population criterion was removed from the analysis as many parishes had low populations. It was considered that the primary criterion to support sustainable development was the presence of a primary school within the parish, as these are the main focal point of a parish and have a significant impact on reduction of car journeys. Other criteria were taken into consideration such as infrastructure capacity, existing levels of committed development and environmental factors.
- 3.3 With regards access to health provision, there are very few villages within Breckland which have GP Surgeries due to population size and the rural nature of the district. NHS England generally adopts an optimum size of 1,800 patients

per whole time equivalent GP. Surgeries outside the main market towns therefore provide a service for a wide rural catchment, and it was not considered in the 2017 Topic paper appropriate to identify local service centres through the existence of a GP surgery within a village. The parishes that do have a GP surgery are: Mattishall, East Harling, Kenninghall, Litcham, Mundford, Narborough, Necton, North Elmham, Shipdham and Swanton Morley.

- 3.4 With reference to the distance between the services and facilities and the service centres; the Institute for Highways and Transport published Guidance for Journeys by Foot, which includes suggested acceptable walking distances. It recommended that the acceptable walking distance for the majority of people is 800m with a preferred maximum distance of 1200m. Any further distance, research showed that residents would use other forms of transport.
- 3.5 Some parishes were screened out of the Local Service Centre analysis due to distances of the main village to local services and these included Scarning, Besthorpe, Croxton and Kilverstone, Carbrooke, Griston and Little Cressingham.
- 3.6 Other parishes which were not considered as Local Service Centres were Yaxham due to its dispersed nature and Saham Toney due to no existing local shop or convenience provision in the village. In 2017, Mundford was also not considered due to its poor bus provision.
- 3.7 The conclusion drawn in the 2017 topic paper was that Ashill, Banham, Bawdeswell, Garboldisham, Great Ellingham, Harling, Hockering, Kenninghall, Litcham, Mattishall, Narborough, Necton, North Elmham, Old Buckenham, Shipdham, Sporle, Swanton Morley and Weeting all met the criteria to continue their designation as Local Service Centre villages. Based on 2011 population data, an uplift of 10% growth was proposed in the Local Plan for Local Service Centres and 7% for villages with boundaries.
- 3.8 It is important to note that the Local Plan remains up to date and the hierarchy of parishes (including the Local Service Centres) remains robust and is consistently supported at planning appeals. The Inspector considering the

Local Plan<sup>1</sup> considered that the methodology used by the Council was robust and his Report (para 38) states:

The third tier of the settlement hierarchy is Local Service Centres (LSC). This includes 18 settlements and the growth of these in total equates to 14% of the overall housing growth in the Plan as set out in Policy HOU 02 (as recommended in MM14). The Council has produced a LSC Topic Paper (LP\_H\_3). This appraised a significant number of settlements against set criteria. To be identified as a LSC, a settlement must have a primary school, shop/post office, a community facility, employment (approximately 20 businesses within the village, with at least two of these employing 10 or more people) and reasonable public transport (including the frequency of services and whether it is possible reach a higher order settlement for normal working hours). The LSC Topic Paper also sets out that walking distances to local services and facilities was also an important factor. Whilst other factors could have been included such as GP surgeries, I am content that the criteria offer a reasonable basis to consider the suitability of settlements to receive growth.

3.9 The Inspector also considered the specific issues set out above with regard to Yaxham / Clint Green and Bawdeswell and agreed with the Council's position. Paragraph 43 of the Inspector's Report states:

I consider that the assessment of all other settlements has been appropriate. I am particularly mindful that such matters often require a planning judgement to be made, which can be finely balanced. However, I am content that the Council's assessment is justified.

3.10 Consequently, as the current approach set out in the Local Plan is up to date and continues to be supported at planning appeals it is considered appropriate to use the existing methodology as a robust basis for the 2023 update.

<sup>&</sup>lt;sup>1</sup>https://www.breckland.gov.uk/media/14546/Report-of-the-Inspector-2019/pdf/Report\_of\_the\_Inspector\_2019.pdf?m=637520995843570000

#### 4 The 2023 Local Service Centre Review Methodology

4.1 The same methodology was applied in that service centres must meet all 5 criteria in the provision of local services. However, the parameters of some of the qualifying criteria have been updated to reflect the changes following the pandemic.

#### 4.2 The qualifying criteria:

A School - A primary school being located within the village is the key criteria, as this still remains as the focal point of a village and its location within a village reduces the number of car journeys.

Public Transport - An assessment of the level of public transport access within the village by focussing on the frequency of services during peak hours to larger settlements. Public transport provision for many villages including some local service centres were poor in the 2017, but a review of those services show that many villages have lost frequency of buses or entire routes. To partly address this Norfolk County Council launched their call on demand flexibus scheme to the west of the district serving those villages around Swaffham and within South Norfolk including some Breckland villages too, to some success. Furthermore, many more people work from home at least part of the time, which has reduced car journeys. Consequently, it is considered that if the public transport is still available to a higher hierarchical settlement with a frequency which allows a reasonable return journey in peak times, then this criterion has been satisfied. (The definition is that a settlement should have public transport still available to a higher hierarchical settlement (so for a Local Service Centre the transport should be to a town/city) with at least four services a day at times that enable a reasonable range of activities, such as a shopping trip or attendance at an appointment to be completed.)

**Community Facility** - This can include a number of different facilities such as a village hall, public house, restaurant or café.

Employment - The assessment has looked at the level of employment available within the village. In the 2017 topic paper, in order to meet the

criterion a parish must have approx. 20 businesses within the village and at least two of these businesses employing 10 or more people. The assessment was based on ONS data which showed registered limited businesses in each village and the number of PAYE employees they employed. The total number of businesses registered has been given, some of these may not provide employment, however, the number gives an indication of how economically active the settlement is. Furthermore, some businesses may be registered in the village but operate elsewhere in the county, and so the location of businesses which have ten or more employees have been checked. If the location cannot be confirmed within the village, the business has been discounted.

It is also worth noting that there has in the last five years been a significant change in business types and sizes as well as working practices e.g., working from home, outsourcing human resource and more self-employment and from the 2021 census, data shows that 74% of businesses do not employ anybody else other than their owners, this can be seen by the large number of small businesses including sole traders in rural locations. Additionally, many businesses tend to work as a network of skills rather than employing directly, so employ a skill when needed for a project or piece of work.

**Shop/Post Office** – Whether there is a village shop or convenience provision within the village e.g., included within a pub. Within this, farm shops have been included and local mobile grocery deliveries.

#### **Notes on Data**

- The 2021 population figures are taking from ONS population estimates and are not actual figures <u>Build a custom area profile - Census 2021, ONS</u>.
- Some research was commissioned in 2022 around mean average dwelling occupation for Norfolk. This was to support the Norfolk Calculator assumptions underlying its calculations. The mean average is 1.89 people per dwelling. As

there only figures available from ONS are estimates and not actuals, the review has multiplied the number of dwellings built since 2011 to 2021 by 1.89<sup>2</sup>

- The completions information used the census years 2011 to 2021
- The Water Restraints are based on Water Cycle Study 2017
- There is no data available on the power constraints.
- Flood Risk was based on EA data and Norfolk County Council's report on Flooding County Wide on 16<sup>th</sup> August 2020 Report (20<sup>th</sup> November 2020)
- Local services: community facilities, shops, public transport gained from village survey audit to parish councils or via desk top research.
- Employment data was obtained from 2023 ONS data and desk top research.

#### 5 Conclusions

- 5.1 All villages identified as local service centres still meet the qualifying criteria of demonstrating 5 out 5 services within their villages. Mundford has also been identified as a Local Service Centre as the public transport provision has now improved with the Swaffham flexibus, which is a daily on demand bus service travelling from / to Swaffham and villages in West Norfolk and Breckland. Rocklands has also been included as a Local Service Centre as it now has additional public transport provision with the No.82 offering frequent services to Attleborough and the new South Norfolk Flexibus to Attleborough too.
- 5.2 No other parishes have met the criteria.
- 5.3 It is considered that although Weeting meets all the criteria for a Local Service Centre, due to the strict environmental constraints of the Stone Curlew Buffer around the village, it is not considered to be an appropriate location for new development. However, for consistency, it is still to be designated as a Local Service Centre.

Village character	Listed Buildings	18	Weeting Castle and Row of Thatched Cottages		
	Status in Local DP	Village o	lassified as Local Services Centre		
Notes	Only applications of up to 10 dwellings allowed and cumulative growth will be scrutinised by NE				
	due to proximity of the Stone Curlew Buffer. To provide 10% growth as per the local plan would				
	require an additional between 80 and 100 dwellings based on 2.3 to 1.89 occupancy.				
	Its proximity to Brandon and its services including the railway station as well as the services				
	present in the village lend it being a service centre. However, the environmental restrictions do				
	not. The school is below	v capacity			
Recommendations	Although Weeting meets all 5 criteria for Local Service Centres due to its proximity to the Stone				
	Curlew Buffer, which restricts its growth significantly, it is considered that Weeting shincluded as a Local Service Centre
